

TECHNICAL DATA SHEET

Calcium nitrate

15.5-0-0 +27CaO

NPK: 15.5-0-0 +27CaO

- 100% water-soluble micro-prills
- Supplies the plant with nitrogen and calcium throughout the growing period
- Improves the availability of potassium and magnesium
- Can be used in both horticulture and agriculture

Chemical composition

Total nitrogen (N)	15.5 %
- Nitric nitrogen (NO ₃)	14.4 %
- Ammoniacal nitrogen (NH ₄)	1.1 %
Calcium oxide (CaO)	27 %

Description

Calanit is a double salt of calcium nitrate and ammonium nitrate. It therefore contains two sources of nitrogen that are easily absorbed by the plant. Calanit is also an important source of calcium and is therefore ideal when the plant has a high need for calcium.

Calanit is chlorine-free which prevents the accumulation of chlorine in the leaves.

PACKAGING:

- 25 kg bag

USES:

- Can be used in fertigation for open field and greenhouse crops
- Is particularly suited to fulfill vegetable and fruit trees requirements during growth and maturation periods
